Summary

AI Engineer with 1+ year designing LLM prompts and rule-based systems for healthcare insurance workflows. Developed prompt chains and boolean logic to automate claim processing and medical document classification. Research from LinguaGemma (user study design, thematic analysis) brings a user-centered lens to system design. Seeking roles in AI systems engineering and LLM application development.

Skills

Languages: Python, Go, C#, JavaScript, TypeScript, HTML/CSS, Linux/Unix

AI & Systems: LLM Prompt Engineering, Claude Code, Claude API, Regex, SQL, Firebase, Git, Version Control

Frameworks & Creative: React, Node.js/Express, Three.js, Unity, Figma, Adobe Creative Cloud, Autodesk Maya

Methods & Research: Workflow & Project Management, Agile/Kanban, Stakeholder Communication, Quality Assurance (QA), User Study Design, Thematic & Semantic Analysis, Data Analysis & Processing

Work Experience

Notable Systems

Remote

Health-tech startup of about 100 employees, providing Intelligent Document Processing to automate insurance workflows.

AI Prompt Specialist

Mar 2026 - Jul 2026

- Developed automated Go scripts for the extraction of key information from unstructured medical documentation, increasing data accuracy for insurance billing workflows.
- Redesigned Asana project taskboards and workflows around Agile Kanban practices for the AI Prompt team, providing for better task monitoring and more accurate progress timelines for stakeholders.
- Created shell and Python scripts to automate large-scale rule testing and client data analysis to reduce manual testing and accelerate implementation cycles.

Business Rules Developer

Mar 2025 - Mar 2026

- Designed LLM prompts and logic-based rules to assess insurance providers' medical product coverage, collaborating with Client Success and Engineering to align custom builds with stakeholder requirements.
- Managed file operations and version control to maintain data integrity throughout rule implementations.

Success Academy Union Square

New York, NY

NYC charter school network known for rigorous, inquiry-based K–12 curriculum.

K-1 Science Teacher

Jul 2024 - Mar 2025

- Guided classes of 25-30 students through hands-on lessons, supplementing curriculum with original materials.
- Tutored students after school and partnered with parents on at-home strategies to help students improve.

Education

Wellesley College

Wellesley, MA

B.A. in Media Arts and Sciences, Computer Science Concentration

May 2024

Honors: 2024 CHI Undergraduate Research Competition Winner

Relevant Coursework: Data Structures, Social Computing, Advanced Projects in Interactive Media

Projects

gaugeCalc: Full-stack tool for recalculating knitting patterns. Claude API parses patterns into structured data; deterministic logic rescales and stamps results onto PDFs. (React, TypeScript, Node.js/Express, Claude API, pdf-lib)

LinguaGemma: Designed and tested prompt logic for an LLM chatbot comparing growth-mindset vs. fixed-mindset response patterns; won 2024 CHI Undergraduate Research Award (team of 3)

Clipboard: Built a web app using JavaScript and Firebase that auto-reveals group matches when event capacity is met, then enables shared planning (team of 3)

In A Jam!: 3D Unity game with player-driven navigation, scripting, and cutscenes (team of 2)
